Home Parenteral Nutrition: Good Practice Guidance for NHS Boards.

The NHS Board in Scotland understand the responsibilities associated with patients who require Home Parenteral Nutrition (HPN) due to conditions such as Crohn's Disease, Intestinal Failure (IF), etc.

Since 2001 support has been available to all clinicians involved with the complex delivery of Home Parenteral Nutrition from the designated National Managed Clinical Network for Home Parenteral Nutrition (HPN NMCN).

A recent review carried out in 2010 set out clinical standards aimed at providing clear guidance on good practice in the delivery of HPN, with appropriate guideline, protocols and procedures. The [Good Practice Guide](http://www.knowledge.scot.nhs.uk) can be found at <http://www.knowledge.scot.nhs.uk> on the HPN Communities of Practice pages:

Clinical Standards

There are eight clinical standards involved with managing the delivery of HPN. Of these, two directly affect patients on HPN

Clinical Standard 2: Patient Information & Education

All patients and/or carers are involved in decisions making at all stages of care, from admission to discharge.

All patients and/or carers are provided with appropriate information materials about diagnosis and treatment.

Rationale

- Patients and Carers have a better ability to cope at home if they are involved in their clinical care decisions.
- Patients and Carers require appropriate training & information to provide them with the confidence & competence to manage at home.

Clinical Standard 8: Follow Up & Monitoring

All patients are provided with continuing support after discharge from an experienced and multi-professional team.

Rationale

- The risk of possible complication will be reduced if patients and/or carers are given ongoing support at home from experienced multi-professional staff.

The full set of [Clinical Standards for HPN](http://www.knowledge.scot.nhs.uk) written by the MCN can be found at <http://www.knowledge.scot.nhs.uk> on the HPN Communities of Practice pages.

Checklist

Clinical Standard 2: Patient Information & Education

- The implications for HPN were fully discussed with you?
- Were the goals of HPN clearly defined with potential benefits and risk identified?
- Were you given details for a patient support group; PINNT (Patients on Intravenous and Naso-gastric Nutrition Therapy)?
- You underwent and completed a thorough training programme?
- Was your training programme adapted to fit in with your physical skills and environment?
- Were you given access to social support from the Department of Work & Pensions (if appropriate)?

Clinical Standard 8: Follow up & Monitoring

- You were given access to 24hr telephone advice with experienced staff?
- You have written information on the detection & treatment of potential complications?
- You receive regular reviews by a multi-professional team on a regular basis (at least every 4 months)?
- Your regular review assesses your supply arrangements, equipment needs, physical and biochemical status?
